# secucapture

**secucapture™ offers accurate employee verification to ensure appropriate access can be monitored in on-site activities, across multiple locations.**

With the nature of business evolving, it is crucial for every business that handles goods and commodities to know what is going on in and out of their sites.

The purpose is to make sure that the paper trail that most businesses now have are replaced by **secucapture** digital process to have sustainable and reliable records. The data gathered is used to make business insights by utilisation of dashboards and reports generated.

Employee Access Tracking

Visitor Access Tracking

Contractor Access Tracking

Vehicle Access Tracking

Driver Attendance Tracking

Truck Access & Turn Around Time Tracking

## Site Access Control and Security

The **secucapture** app provided with android rugged devices is used to log all the entries with NFC chip to detect the in and out accesses into the sites (via face recognition, data entry and NFC tapping of cards and windshields tags).

Our web-based backend system allows site managers and controllers to access real-time data that updated from the app.

## Safety Roll Call

The system also provides a safety roll call management system for Employees, Visitors and Contractors. This harvests data from all the access records to make sure that everyone is accounted for in the event of a site emergency. It is vital to provide this system to avoid any issues related to safety.

## Safety Equipment & Fire-extinguisher inspection

Tag all the equipment that need safety control and all your Fire Extinguishers with NFC anti metal tags provided by CAPTURE Solutions to understand when they are due to be replaced or services.

A module within Secucapture allows you to inventoize and do a check-up across your site. The system will also remind you which extinguisher is expiring.

## Secucapture Cargo

The system also provides features to manage truck-cargos combining it with the ERP of the company to provide que management for trucks coming in and then leaving the site in a secure and orderly manner providing notification features for the customers (sms and email).
