IoT | MDM

## timecapture

### timecapture™ ensures businesses & organisations can accurately track the time and attendance of employees and visitors

timecapture™ is a unique application using biometrics and IoT technology to improve employee management by registering workers' biometrics and using them for clocking in/ out, while also recording and communicating the GPS location to a centralized cloud application.

The cloud based back-end allows the administrator to manage employee information, add tasks and receive real-time information.

Add Ons

#### 1. Attendance (onsite and offsite)

Daily attendance onsite can be recorded via a selection of devices through fingerprints, facial recognition and/or digitally unique cards. The same functionality can be achieved offsite through mobile devices. All solutions can work offline and push data centrally when data is made available.

#### 2. Payroll

Our solution can come with Capture Solutions in-house payroll or integrate with existing payroll solutions.

#### 3. Task Management

Remotely assign and monitor tasks. Receive realtime updates on task completion using infield smart devices.

#### 4. Employee Management

Digitise employee records with biometrics in a web-based back-end and available on mobile applications. Improve company scheduling, planning, communication and reporting through automated processes.

#### 5. Inventory Control

Keep track of purchases, movement and the usage of vital raw materials managing multiple types of inventory through self-customized reports.

#### 6. SMS and Email Notifications

Automatic SMS or email notifications to keep stakeholders up to date.

## Case Study

# Better Globe Forestry

Better Globe Forestry Ltd was incorporated in Kenya in 2004 and in Uganda in 2009 with the vision to eradicate poverty and corruption. Its mission, through "Social Entrepreneurship", is to plant as many trees as there are people on this planet, and thereby finance a sustainable implementation of the vision.

timecapture™ has greatly helped us as an organisation in streamlining our distributed workforce management.

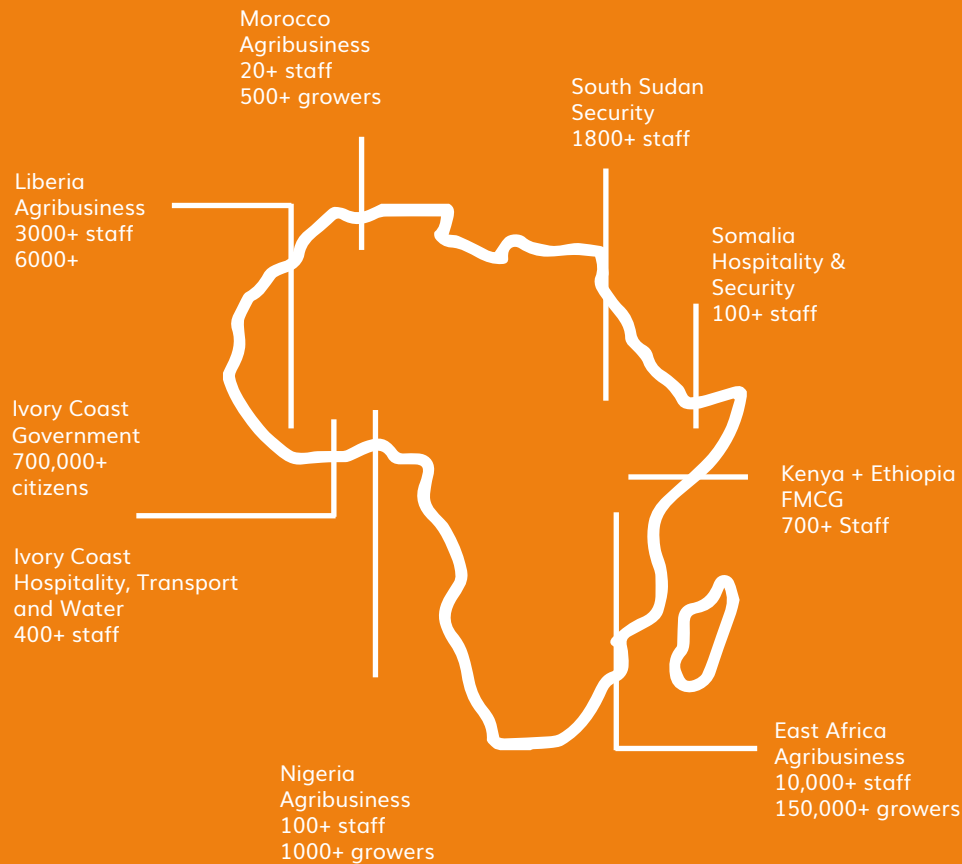

Our associates are located in multiple remote locations across East Africa and before implementing timecapture, we had to waste resources in logistics and our officers had to sign multiple documents for leave and tasks allocation which would take time to approve.

We are sure of our attendance data as workers are identified biometrically and information is sent to our backend system in Real-Time. Reporting has also been automated which management can now access from anywhere.

**Lawrence Muema**  
Director of Finance

Better Globe Forestry currently employs 170 staff, and 500-1000 casual workers, depending on the season.
